

Exam

- Q1.** What is the purpose of the 'ord' function?
- A) To determine the sequence of a string
 - B) To get the next line in a file
 - C) To open a file in read-only mode
 - D) To get the Unicode code point of a character
- Q2.** Which section discusses the built-in functions?
- A) Section 1.5
 - B) Section 1.6
 - C) Section 1.7
 - D) Section 1.8
- Q3.** Which built-in function is used to open a file with the given name and access mode?
- A) open()
 - B) ord()
 - C) iterable()
 - D) next()
- Q4.** Which section in the Python documentation explains more about built-in functions?
- A) Section 1.6
 - B) Section 9.4
 - C) Section 12.6.1
 - D) Section 1.8
- Q5.** What type of data structure can be opened by the 'open' function?
- A) A directory
 - B) A file object
 - C) A data structure that can be iterated over
 - D) A data structure that cannot be modified once created
- Q6.** What is returned by the ord function?
- A) String data type
 - B) Open file access mode
 - C) Unicode code point of the given character
 - D) Next element reported by the iterator
- Q7.** What type of data structure is represented by an 'iterable' in Python?
- A) A file object
 - B) A sequence of elements
 - C) A data structure that can be iterated over
 - D) A data structure that does not support iteration

Q8. Which section discusses iterators and iterable data types?

- A) Section 1.5
- B) Section 1.8
- C) Section 12.6.1
- D) Section 9.4

Q9. What is used to represent an instance of any iterable type?

- A) string
- B) tuple
- C) iterable
- D) sequence

Q10. What is a sequence in Python?

- A) A type of data structure that includes str, list, and tuple
- B) A type of data structure that can hold any type of object, such as strings, numbers, or other sequences
- C) A type of data structure that can only hold strings
- D) A type of data structure that cannot be modified once created

Q11. What is returned by the 'open' function?

- A) A list of file names
- B) A file object that can be used for reading and writing
- C) The Unicode code point of a character
- D) The next line in a file

Q12. Which category of indexable classes includes str, list, and tuple?

- A) sequences
- B) iterables
- C) collections
- D) arrays

Q13. Which sections discuss sorting algorithms?

- A) Section 9.4 and Section 12.6.1
- B) Section 1.8 and Section 9.4
- C) Section 1.5 and Section 1.8
- D) Section 1.6 and Section 1.7

Q14. Section 9.4, when discussing sorting algorithms, what further explores the topic?

- A) Identifiers
- B) Built-in functions
- C) Iterators
- D) Sequences

Q15. What page discusses simple input and output in Python?

- A) Page 30
- B) Page 1
- C) Page 28
- D) Page 1.5

Q16. Which built-in function is used to return the next element reported by the iterator?

- A) iterable()
- B) open()
- C) next()
- D) ord()

Q17. What data types are considered as sequences?

- A) set and dict
- B) str, list, and tuple
- C) list and tuple
- D) int and float

Q18. What is the identifier 'iterable' used to represent?

- A) A data structure that can be iterated over
- B) An instance of any iterable type
- C) A sequence of elements
- D) A data structure that cannot be modified once created

Q19. What is the Unicode code point of the given character used for?

- A) File names
- B) Sorting algorithms
- C) Unicode character representation
- D) Identifiers for iterable

Q20. What access mode is used by the open function?

- A) File access mode not specified by the open function
- B) Read/Write
- C) Read/Write/Execute
- D) Read/Execute

Answer Key

1. D	2. A	3. A	4. D	5. B
6. C	7. C	8. B	9. C	10. A
11. B	12. A	13. A	14. C	15. A
16. C	17. B	18. B	19. C	20. A
