

Exam

- Q1.** Which data types does SQL use for integer values?
- A) int, float, long
 - B) float, double, long double
 - C) long, short, integer
 - D) char, varchar, binary
- Q2.** What is the primary key for the table in the example?
- A) course_id, sec_id, semester, and year
 - B) course_id and sec_id
 - C) semester and year
 - D) course_id
- Q3.** Given a SQL table section, how many total columns can be in the table?
- A) 15
 - B) unlimited
 - C) no limit
 - D) 8
- Q4.** How to define a SQL table with a specific column width?
- A) By defining the column width in parentheses
 - B) By using the Check constraint
 - C) By using a comment
 - D) By using the Not Null constraint
- Q5.** Which of the following is not a primitive data type in SQL?
- A) long double
 - B) binary
 - C) char
 - D) integer
- Q6.** What is the subname of the subject with code 335CT?
- A) Algorithms
 - B) Operating Systems
 - C) Data Structures
 - D) Theory of Computation
- Q7.** Given an example SQL table, how to use the Check constraint to enforce data integrity?
- A) By using a trigger
 - B) By using the where clause
 - C) By creating a unique index
 - D) By adding the Check constraint

Q8. What does a primary key uniquely identify in a SQL table?

- A) Two columns in a table
- B) Four columns in a table
- C) A row in a table
- D) A column in a table

Q9. What is the purpose of the author ID in the subject table?

- A) To associate subjects with lecturers
- B) To associate subjects with students enrolled
- C) To associate subjects with the number of students enrolled
- D) To associate subjects with the year of introduction

Q10. What is the number of hours per week for the subject with code 335CT?

- A) Lecture: 6, Practical: 3
- B) Lecture: 0, Practical: 0
- C) Lecture: 0, Practical: 2
- D) Lecture: 4, Practical: 0

Q11. Which operation on transaction table is given as an example?

- A) Delete the Transaction
- B) Update Time Slot ID
- C) Lock-X on X
- D) Write(X) on X

Q12. Which constraint in SQL checks if a given semester name is among a set of predefined values?

- A) Not Null
- B) Check
- C) Unique
- D) Primary Key

Q13. What is the primary purpose of the transaction table?

- A) To track changes made by multiple users
- B) To optimize query execution
- C) To monitor database performance
- D) To manage data consistency

Q14. Why is the 'Time Slot ID' a suitable column name for a table?

- A) Because it uniquely identifies a time slot
- B) Because it stores the duration of a time slot
- C) Because it stores the start time of a time slot
- D) Because it stores the end time of a time slot

Q15. What is the primary data type used in the transaction table?

- A) Integer
- B) Timestamp
- C) Time slot id
- D) float

Q16. What does the SQL command Write(X) do on the Transaction table?

- A) Write the timestamp on X
- B) Lock the X on X
- C) Delete the transaction X
- D) Write(X) updates the value of variable X in the table

Q17. Which of the following data types is suitable for storing a date in SQL?

- A) char
- B) date
- C) int
- D) float

Answer Key

1. A	2. A	3. B	4. A	5. A
6. C	7. D	8. C	9. A	10. A
11. D	12. B	13. A	14. A	15. B
16. D	17. B
